

Safeguarding and Welfare Requirement: Health

Providers must have and implement a policy, and procedures, for administering medicines. It must include systems for obtaining information about a child's needs for medicines, and for keeping this information up-to-date.

6.1 Administering medicines

Policy statement

While it is not our policy to care for sick children, who should be at home until they are well enough to return to the setting, we will agree to administer medication as part of maintaining their health and well-being or when they are recovering from an illness. We ensure that where medicines are necessary to maintain health of a child, they are given correctly and in accordance with legal requirements.

In many cases, it is possible for children's GPs to prescribe medicine that can be taken at home in the morning and evening. As far as possible, administering medicines will only be done where it would be detrimental to the child's health if not given in the setting. If a child has not had a medication before, it is advised that the parent keeps the child at home for the first 48 hours to ensure there are no adverse effects, as well as to give time for the medication to take effect.

Our staff are responsible for the correct administration of medication to children. This includes ensuring that parent consent forms have been completed, that medicines are stored correctly and that records are kept according to procedures. We notify our insurance provider of all required conditions, as laid out in our insurance policy.

Procedures

- Children taking prescribed medication must be well enough to attend the setting.
- We only usually administer medication when it has been prescribed for a child by a doctor (or other medically qualified person). It must be in-date and prescribed for the current condition.
- Children's prescribed medicines are stored in their original containers, are clearly labelled and are inaccessible to the children. On receiving the medication, the member of staff checks that it is in date and prescribed specifically for the current condition.
- Parents must give prior written permission for the administration of medication. The staff member receiving the medication will ask the parent to fill in the medication records book to give their consent completing the following information. No medication may be given without these details being provided:
 - The full name of child.
 - The name of medication and expiry date.
 - Name of doctor.

The dosage and times to be given in the setting.

- The method of administration.
 - Circumstances in which to administer (if for emergency use).
 - The signature of the parent, and the date.
- The administration of medicine is recorded accurately in our medication record book each time it is given and is signed by the person administering the medication and a witness. Parents are shown the record at the end of the day and asked to sign the record book to acknowledge the administration of the medicine. The medication record book records the:
 - date and time of the dose;
 - quantity administered;
 - signature of the person administering the medication and a witness; and
 - parent's signature and date.
 - If the administration of prescribed medication requires medical knowledge, we obtain individual training for the relevant member of staff by a health professional.
 - If any intimate care medication is given, another member of staff must be present and co-signs the record book.
 - No child may self-administer. Where children are capable of understanding when they need medication, for example with asthma, they should be encouraged to tell a member of staff what they need. However, this does not replace staff vigilance in knowing and responding when a child requires medication.
 - We monitor the medication record book to look at the frequency of medication given in the setting. For example, a high incidence of antibiotics being prescribed for a number of children at similar times may indicate a need for better infection control.

Storage of medicines

- All medication is stored safely out of reach of children in the kitchen in the medication box or refrigerated as required.
- Staff are responsible for ensuring medicine is handed back at the end of the day to the parent.
- For some conditions, medication may be kept in the setting to be administered on a regular or as-and-when-required basis. Staff check that any medication held in the setting, is in date and return any out-of-date medication back to the parent.

Children who have long term medical conditions and who may require ongoing medication

- We carry out a risk assessment for each child with a long term medical condition that requires on-going medication. This is the responsibility of our manager who will feed information back to all members of staff. Other medical or social care personnel may need to be involved in the risk assessment.
- Parents will also contribute to a risk assessment. They should be shown around the setting, understand the routines and activities and point out anything which they think may be a risk factor for their child.

- For some medical conditions, key staff will need to have training in a basic understanding of the condition, as well as how the medication is to be administered correctly. The training needs for staff form part of the risk assessment.
- The risk assessment includes vigorous activities and any other activity that may give cause for concern regarding an individual child's health needs.
- The risk assessment includes arrangements for taking medicines on outings and advice is sought from the child's GP if necessary where there are concerns.
- An individual health plan for the child is drawn up with the parent; outlining the settings role and what information must be shared with other adults who care for the child.
- The individual health plan should include the measures to be taken in an emergency.
- We review the individual health plan every six months, or more frequently if necessary. This includes reviewing the medication, e.g. changes to the medication or the dosage, any side effects noted etc.
- Parents receive a copy of the individual health plan and each contributor, including the parent, signs it.

Managing medicines on trips and outings

- If children are going on outings unaccompanied by parent, the key person for the child will accompany the children with a risk assessment, or another member of staff who is fully informed about the child's needs and/or medication.
- Medication for a child is taken in a sealed plastic box clearly labelled with the child's name and the name of the medication. The medication record book to record when it has been given, including all the details that need to be recorded in the medication record as stated above.
- On returning to the setting the medication book is signed by the parent if medicine has been administered.
- If a child on medication has to be taken to hospital, the child's medication is taken with them. This procedure should be read alongside the outing's procedure.

Legal framework

- The Human Medicines Regulations (2012)
